Global Network

We have built the strong networks with cross-border transfer centers and international logistic partnerships, which provide the accountable logistics solutions from our joint ventures in North America, Europe, South Korea, Japan, Vietnam, India, Southeast Asia, and the Middle East. JUSDA, with years of experience in 3C manufacturing supply chain, has launched 7 core products which include road freight, air freight, ocean freight, rail freight, warehousing, import and export BPO service platform and supply chain finance. The strong location networks, 150 locations worldwide, more than 2.5 million square meters of warehousing space, 45 logistics and logistics service centers, 110 overseas cross-border operations centers, and more than 1,500 international air, ocean and truck routes, give great competence to enhance business efficiency.

In Greater China

JUSDA is a trustworthy business partner for B2B enterprises with its unique market positions. JUSDA has been strategically enabling business solutions with the strong capability of integrated platform service and 6 in 1 embedded flow which includes logistics, people, process, information, technology, and finance flows. JUSDA provides end to end lean supply chain management service with the industry network of electronic manufacturing and 3C appliances. Facilitates business service network across South China, East China, North China, Central China, Southwest China, and Taiwan with the head-quarter based in Shenzhen.

We believe that information technology can truly revolutionize supply chains. Our intelligent information technology strategy comprehensively uses big data analysis, cloud platform construction, and integrated information network application to provide customers with comprehensive information analysis of the entire network to achieve the collaborative operation of the smart system platform. In addition, JUSDA provides customers with more accurate business decision analysis and more efficient resources. Our intelligent supply chain and real-time collaboration platform is in progress, and with this platform, suppliers, manufacturers, service providers, and customers can collaborate and be integrated to allow each party to obtain more valuable information and materials and fully support the supply chain management and operation services of its own and external customers' information systems, in the meantime giving the agility to respond to customer needs.

We're working closely with customers to look at their entire supply chains, from point of origin to the end-consumer, to identify the opportunities and develop Supply Chain Ecosystems. The development plan for the next three years will focus on the real-time control tower platform of supply chain logistics, technology, IOT, and big data.

With the outstanding global supply chain management experience, JUSDA has been certified with the national AAAAA integrated logistic enterprise qualification, AEO enterprise advanced certification, ISO9001, NVOCC, and World Cargo Alliance. JUSDA has become a significant business partner to more than 3,000 3C component manufacturers and customers around the world and serves more than 1,000 well-known brand customers.
